Appl. No.09/687,414 Amdt. dated August 15, 2003 Reply to Office Action of 05/09/2003

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1	1. (Currently Amended) An article of manufacture for use in a data processing system for
2	downloading an application program from a remote data processing system for execution by a
3	particular user on a local data processing system, said data processing system comprising the
4	local data processing system and the remote data processing system, said article of manufacture
5	comprising a computer-readable storage medium having a computer program embodied in said
	medium which causes the data processing system to execute the method eterm comprising:

defining and storing a <u>user</u> configuration of the application program corresponding to a particular user of the application program;

initiating a session between the local data processing system and the remote data processing system in response to the <u>particular</u> user requesting the application program; authenticating the <u>particular</u> user in response to the <u>particular</u> user requesting the application program; and

responsive to the user authentication, downloading data from the remote data processing system to the local data processing system according to the stored <u>user</u> configuration.

10

11

14

2. (Currently Amended) The article of manufacture of claim 1 wherein the data processing 1 system is a local data processing system, and wherein the computer program embodied in said 2 medium causes the data processing system to execute the additional method steps comprising: 3 encrypting and storing the user configuration in a manifest file; 4 decrypting the manifest file to produce a deerypted user configuration in response 5 to the user authentication; and 6 downloading data from the remote data processing system to the local data 7 processing system according to the decrypted user configuration. 3. (Currently Amended) The article of manufacture of claim 2 wherein the computer program embodied in said medium causes the data processing system to execute the additional method 2 steps comprising: encrypting and storing the user configuration in a manifest file stored on the remote data processing system; downloading the manifest file from the remote data processing system to the local 7 data processing system; decrypting the downloaded manifest file to produce a downloaded user 8 configuration in response to the user authentication; and 9 downloading data from the remote data processing system to the local data 10 processing system according to the downloaded <u>user</u> configuration. 11

3

4

8

- 4. (Currently Amended) The article of manufacture of claim 1 wherein the computer program embodied in said medium causes the data processing system to execute the additional method step comprising:
- building the application program pursuant to the <u>user</u> configuration decrypted from the manifest file responsive to the <u>a</u> second authentication.
 - 5. (Currently Amended) The article of manufacture of claim 4 wherein the computer program embodied in said medium causes the data processing system to execute the additional method steps comprising:
 - authenticating the <u>particular</u> user in a <u>the</u> second authentication responsive to the <u>particular</u> user requesting a build of the application program;
 - decrypting the manifest file responsive to the second authentication; and building the application program pursuant to the <u>user</u> configuration decrypted from the manifest file responsive to the second authentication.
- 6. (Currently Amended) The article of manufacture of claim 1 wherein the <u>user</u> configuration
- 2 comprises data describing the <u>particular</u> user, the <u>particular</u> user's application program
- configuration, and resources for which the <u>particular</u> user is authorized.

7. (Currently Amended) A method of downloading an application program from a remote data processing system for execution by a particular user on a local data processing system, said method comprising the steps of:

defining and storing a <u>user</u> configuration of the application program corresponding to a <u>the</u> particular user of the application program;

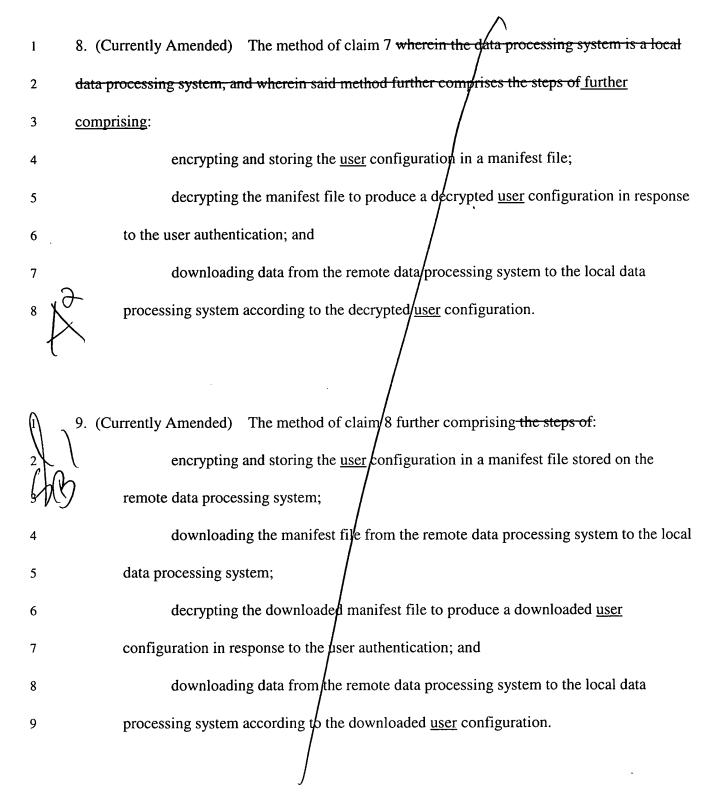

initiating a session between the local data processing system and the remote data processing system in response to the <u>particular</u> user requesting the application program; authenticating the <u>particular</u> user in response to the <u>particular</u> user requesting the

application program; and

responsive to the user authentication, downloading data from the remote data processing system to the local data processing system according to the stored <u>user</u> configuration.

1

2

2

1 10. (Currently Amended) The method of claim 7 further comprising the step of:
2 building the application program pursuant to the user configuration decrypted

from the manifest file responsive to the a second authentication.

11. (Currently Amended) The method of claim 10 further comprising the steps of:

authenticating the <u>particular</u> user in a <u>the</u> second authentication responsive to the <u>particular</u> user requesting a build of the application program;

decrypting the manifest file responsive to the second authentication; and building the application program pursuant to the <u>user</u> configuration decrypted from the manifest file responsive to the second authentication.

1 12. (Currently Amended) The method of claim 7 wherein the <u>user</u> configuration comprises

data describing the particular user, the particular user's application program configuration, and

resources for which the <u>particular</u> user is authorized.

13

14

13. (Currently Amended) A computer system for use in a/data processing system for 1 downloading an application program from a remote data processing system for execution by a 2 3 particular user on a local data processing system, said data processing system comprising the local data processing system and the remote data processing system, said computer system comprising: a stored user configuration of the application program corresponding to a the particular user of the application program; a session between the local data processing system and the remote data processing system in response to the particular user requesting the application program; an authentication of the particular user in response to the particular user requesting the application program/ and 11 12 a downloader, responsive to the user authentication, for downloading data from

a downloader, responsive to the user authentication, for downloading data from the remote data processing system to the local data processing system according to the stored user configuration.

		•
1	14. ((Currently Amended) The computer system of claim 13 further comprising:
2		a manifest file comprising an encrypted user configuration;
3		a decryptor for decrypting the manifest file in response to the user authentication;
4		and
5		a downloader for downloading data from the remote data processing system to the
6		local data processing system according to the stored <u>user</u> configuration.
13	_	
. 1	15. ((Currently Amended) The computer system of claim 14 further comprising:
2 N	γ	a manifest file comprising an encrypted user configuration stored on the remote
3		data processing system;
4	MA	a downloader for downloading the manifest file from the remote data processing
5	•	system to the local data processing system;
6		a decryptor for decrypting the manifest file in response to the user authentication
7		to produce a downloaded user configuration; and
8		a downloader, responsive to the user authentication, for downloading data from
9		the remote data processing system to the local data processing system according to the
10		downloaded <u>user</u> configuration.
